Mexico's Oil and Gas Industry Neil Becker 2015
The future of oil and natural gas production in Mexico is of importance for both Mexico's economic growth, as well as for U.S. energy security, a key congressional interest. Mexico is a top trade partner and the 3rd largest crude oil supplier to the United States. Mexico's state oil company, Petroleos Mexicanos (Pemex) remains an important source of government revenue even as it is struggling to counter declining oil production and reserves. Due to an inability to meet rising demand, Mexico has also significantly increased natural gas imports from the United States. Still, gas shortages have hindered the country's economic performance. This book provides an overview of Pemex and the content and prospects for Mexico's energy reforms, before discussing specific issues facing Mexico's oil and gas industry. It then examines the U.S.-Mexico energy relationship through the lenses of trade and energy cooperation. It concludes by suggesting several oversight issues for Congress related to what the enactment of energy reform might portend for Mexico's economic development, the U.S. energy matrix, and bilateral or North American energy cooperation.

Brown presenta un interesante análisis de las causas y efectos de las operaciones de las compañías petroleras norteamericanas e inglesas en México entre 1880 y 1920, periodo en el que el país se sumergió en la primera revolución social del siglo XX. También revisa muchos conceptos erróneos sobre las inversiones extranjeras sugiriendo a los que creen que las políticas mexicanas de privatización y libre comercio son las olas del futuro pongan atención a la experiencia histórica de la nación con las compañías petroleras, ya que según el autor, el camino que los mexicanos seguirán durante los próximos decenios será similar.

The Mexican Oil Boom

Michael Gavin 1996

The Mexican oil boom was characterized by a period of high investment, followed by capital flight. The private sector and households responded to the 1977-1981 windfall by attaining high savings rates. On the other hand, the Mexican government, the proprietor of the state oil company and the principal beneficiary of the oil boom, used windfall revenues to finance unsustainable spending and even engage in dissaving. These policies produced macroeconomic dislocations that made Mexico highly vulnerable to the inevitable external shocks.

Savings, Investment, and Growth in Mexico

International Monetary Fund 1989-01-01

Despite Mexico's recent remarkable progress in adjusting its fiscal and external accounts and in restructuring its economy, the recovery of growth has remained elusive. This paper reviews some aspects of Mexico's recent performance and suggests that systemic adjustment uncertainty, and policy conflicts between stabilization and real depreciation objectives, are among the factors that have contributed most to delaying the private sector's investment response and preventing a sustainable recovery. The paper also assesses future growth prospects and resource mobilization needs, based on a growth model that fully incorporates the internal transfer problem and emphasizes solvency requirements.
