Part II looks at the historical development of dialogue and the early days of human communication. It examines the role of dialogue in prehistoric societies and the evolution of language and communication through the ages.

Part III offers an overview of key challenges for early childhood educators, researchers, and policy-makers. It explores the importance of dialogue in the development of early childhood educators and how dialogue can be used to support the social, emotional, and cognitive development of young children.

Part IV focuses on the role of dialogue in the development of creativity and critical thinking. It examines how dialogue can be used to foster creativity and critical thinking in young children and how it can be used to encourage the development of effective communication skills.

Part V considers how digital technologies both influence and are influenced by dialogue. It examines the role of digital technologies in the development of dialogue and how dialogue can be used to support the development of digital literacy.

At the same time the 1993 SNA reflects the many significant developments that have taken place in financial markets and completes the integration of balance sheets into the system.
