Thirty years ago, a new linguistic paradigm was created when Einar Haugen, for the first time, combined language with ecology. For Haugen, ‘the ecology of language’ meant the study of the interrelations between languages in the human mind and in the multilingual community. Since then a special branch of linguistics, named ecolinguistics, has developed in which the connection between language and ecology has been established in a variety of ways and by using a multitude of methods and approaches. This reader contains important articles from all the different fields of ecolinguistics - a volume long overdue for a discipline now recognized as a significant contribution to variety within the subject.
question some of the fundamental stories that we live by: stories of unlimited economic growth, of consumerism, progress, individualism, success, and the human domination of nature. Ecolinguistics shows how linguistic analysis can help reveal the stories we live by, open them up to question, and contribute to the search for new stories. Bringing together the latest ecolinguistic studies with new theoretical insights and practical analyses, this book charts a new course for ecolinguistics as an engaged form of critical enquiry. Featuring: A framework for understanding the theory of ecolinguistics and applying it practically in real life; Exploration of diverse topics from consumerism in lifestyle magazines to Japanese nature haiku; A comprehensive glossary giving concise descriptions of the linguistic terms used in the book; Discourse analysis of a wide range of texts including newspapers, magazines, advertisements, films, nonfiction books, and visual images. This is essential reading for undergraduates, postgraduates and researchers working in the areas of Discourse Analysis and Language and Ecology.

The Routledge Handbook of Ecolinguistics-Alwin F. Fill 2017-07-31 The Routledge Handbook of Ecolinguistics is the first comprehensive exploration into the field of ecolinguistics, also known as language ecology. Organized into three sections that treat the different topic areas of ecolinguistics, the Handbook begins with chapters on language diversity, language minorities and language endangerment, with authors providing insight into the link between the loss of languages and the loss of species. It continues with an overview of the role of language and discourse in describing, concealing, and helping to solve environmental problems. With discussions on new orientations and topics for further exploration in the field, chapters in the last section show ecolinguistics as a pacesetter into a new scientific age. This Handbook is an excellent resource for students and researchers interested in language and the environment, language contact, and beyond.

The Ecology of Language-Einar Ingvald Haugen 1972

Sustaining Language-Alwin Fill 2007 Can language diversity be sustained on this earth? Can the resource language be used in a sustainable way? The essays in this volume address language loss in the age of globalization and discuss how language construes our view of Nature and Environment. The volume is also a plea for using an ecolinguistic perspective in school teaching Alwin Fill is professor of English Linguistics at the University of Graz (Austria). Hermine Penz is assistant Professor of English Studies at the University of Graz.
Animals Erased—Arran Stibbe 2012-04-06 Animals are disappearing, vanishing, and dying out—not just in the physical sense of becoming extinct, but in the sense of being erased from our consciousness. Increasingly, interactions with animals happen at a remove: mediated by nature programs, books, and cartoons; framed by the enclosures of zoos and aquariums; distanced by the museum cases that display lifeless bodies. In this thought-provoking book, Arran Stibbe takes us on a journey of discovery, revealing the many ways in which language affects our relationships with animals and the natural world. Animal-product industry manuals, school textbooks, ecological reports, media coverage of environmental issues, and animal-rights polemics all commonly portray animals as inanimate objects or passive victims. In his search for an alternative to these negative forms of discourse, Stibbe turns to the traditional culture of Japan. Within Zen philosophy, haiku poetry, and even contemporary children’s animated films, animals appear as active agents, leading their own lives for their own purposes, and of value in themselves.

Pour Une Écologie Des Langues Du Monde—Louis-Jean Calvet 2006-06-23 There are around 5,000 languages spoken across the world today, but the languages that coexist in our multilingual world have varied functions and fulfil various roles. Some are spoken by small groups, a village or a tribe; others, much less numerous, are spoken by hundreds of millions of speakers. Certain languages, like English, French and Chinese, are highly valued, while others are largely ignored. Even if all languages are equal in the eyes of the linguist, the world’s languages are in fact fundamentally unequal. All languages do not have the same value, and their inequality is at the heart of the way they are organized across the world. In this major book Louis-Jean Calvet, one of the foremost sociolinguists working today, develops an ecological approach to language in order to analyse the changing structure of the world language system. The ecological approach to language begins from actual linguistic practices and studies the relations between these practices and their social, political and economic environment. The practices which constitute languages, on the one hand, and their environment, on the other, form a linguistic ecosystem in which languages coexist, multiply and influence one another. Using a rich panoply of examples from across the world, Calvet elaborates the ecological approach and shows how it can shed light on the changing forms of language use in the world today. This path-breaking book will be of great value to students and scholars in linguistics and sociolinguistics and to anyone concerned with the fate of languages in our increasingly globalized world.

Ecocriticism in Malayalam—G. Madhusoodanan 2022-02-06 The global trend in the scholarly field of ecocriticism (or, broadly, environmental humanities) is shifting towards localized sub-areas. This shift has been instrumental in canonizing local, subaltern, postcolonial, and unheard voices in ecocriticism. Such ecocriticism has gained relevant significance in the disciplines of humanities and social sciences, and boldly displays diverse ecocultural perspectives on communities, societies, languages and literatures—all of these being distinctly different from each other. Weaving a unique, ecocritical narrative from the rich literary and cultural texts belonging to
Kerala, this volume presents several ecocritical perspectives, written by award-winning writers in Malayalam.

**Eco-Translation**-Michael Cronin 2017-01-06 Ecology has become a central question governing the survival and sustainability of human societies, cultures and languages. In this timely study, Michael Cronin investigates how the perspective of the Anthropocene, or the effect of humans on the global environment, has profound implications for the way translation is considered in the past, present and future. Starting with a deep history of translation and ranging from food ecology to inter-species translation and green translation technology, this thought-provoking book offers a challenging and ultimately hopeful perspective on how translation can play a vital role in the future survival of the planet.

**Language Acquisition and Language Socialization**-Claire Kramsch 2003-02-01 'This is an outstanding collection of papers by top scholars in a range of disciplines who shed stimulating, complementary insights into the social, cognitive and semiotic frameworks that shape both the acquisition of language, and the constitution of social actors through that process. The intentionally loose ecological framing of the volume provides an arena within which a range of perspectives, all united by their opposition to a mechanistic view of language acquisition, can enter into dialogue with each other. This is a most stimulating collection, with a range of insightful investigations of settings as diverse as an autistic child learning to interact with others on the playing field, professional gate-keeping encounters, and foreign language classrooms.' Professor Charles Goodwin, University of California at Los Angeles The book brings together well-known scholars in two relatively distinct fields, language acquisition and language socialization, and from a variety of orientations within applied linguistics to describe language development from a relational perspective. The papers in this volume are a response to three main questions: 1) What conceptual models best capture the ecological nature of language learning? 2) What research approaches are best likely to illuminate the relationship between language and social structure? 3) How is educational success defined for language acquisition and language socialization?

**Interactions, Images and Texts**-Sigrid Norris 2014-08-20 Multimodality is a fast-growing interdisciplinary approach that aims to analyze the interplay of multiple modes such as gaze, gesture or spoken language that are utilized in interaction, and to examine the multimodal production and consumption of communicated messages. This Reader provides a comprehensive text of current research into multimodality, outlining in-depth delineation of each primary theoretical and methodological approach, as well as personal accounts of scholars, who are responsible for the various approaches’ advancements. The book additionally offers a plethora of analysis chapters, written by scholars from across the world, with vastly diverse themes ranging from buying popcorn, protests in Oman, coaching sessions...
and identity, to kitesurfing, typography, TV news, billboards, workplace practices, or analyzing web pages, Facebook, comic books, and more. Flexible and easy to use, the Reader includes key terms, suggested further readings, and a project idea for each chapter. The key terms for the chapters also comprise the extensive alphabetical glossary. Brief introductions for the analysis chapters, written by the editors, summarize the topic, explain the methodology used, outline the thematic orientation, and link each chapter to other chapters in the book. Showcasing multimodal analysis in detail, this Reader is essential reading for undergraduate and postgraduate students, for emergent researchers, and for advanced scholars who wish to gain insight into the current state of multimodal research.

**The Ecology of Language in Multilingual India** - Cynthia Groff 2017-10-27 This book explores the linguistic ecology of the Kumaun region of Uttarakhand, India through the experiences and discourses of minority youth and their educators. Providing in-depth examples of Indian multilingualism, this volume analyses how each language is valued in its own context; how national-level policies are appropriated and contested in local discourses; and how language and culture influence educational opportunities and identity negotiation for Kumauni young women. In doing so, the author examines how students and educators navigate a multilingual society with similarly diverse classroom practices. She simultaneously critiques the language and education system in modern India and highlights alternative perspectives on empowerment through the lens of a unique Gandhian educational context. This volume allows Kumauni women and their educators to take centre stage, and provides a thoughtful and nuanced insight into their minority language environment. This unique book is sure to appeal to students and scholars of multilingualism, sociolinguistics, language policy and minority languages.

**Nature in Literary and Cultural Studies** - 2006-01-01 Nature in Literary and Cultural Studies is a collection of essays written by European and North American scholars who argue that nature and culture can no longer be thought of in oppositional, mutually exclusive terms. They are united in an effort to push the theoretical limits of ecocriticism towards a more rigorous investigation of nature’s critical potential as a concept that challenges modern culture’s philosophical assumptions, epistemological convictions, aesthetic principles, and ethical imperatives. This volume offers scholars and students of literature, culture, history, philosophy, and linguistics new insights into the ongoing transformation of ecocriticism into an innovative force in international and interdisciplinary literary and cultural studies.
**Language Rights**-V. Pupavac 2012-09-23 Exploring language rights politics in theoretical, historical and international context, this book brings together debates from law, sociolinguistics, international politics, and the history of ideas. The author argues that international language rights advocacy supports global governance of language and questions freedoms of speech and expression.

**The Ecology and Semiotics of Language Learning**-Leo van Lier 2006-04-18 In this book I try to give a coherent and consistent overview of what an ecological approach to language learning might look like. This is not a fully fledged grand theory that aims to provide an explanation of everything, but an attempt to provide a rationale for taking an ecological world view and applying it to language education, which I regard as one of the most important of all human activities. Goethe once said that everything has been thought of before, but that the difficulty is to think of it again. The same certainly is true of the present effort. If it has any innovative ideas to offer, these lie in a novel combination of thoughts and ideas that have been around for a long, long time. The reader will encounter influences that range from Spinoza to Bakhtin and from Vygotsky to Halliday. The scope of the work is intentionally broad, covering all major themes that are part of the language learning process and the language teaching profession. These themes include language, perception and action, self, learning, critical pedagogy and research. At the same time I have attempted to look at both the macro and the micro sides of the ecological coin, and address issues from both a theoretical and a practical perspective. This, then, aims to be a book that can be read by practitioners and theoreticians alike, and the main idea is that it should be readable and challenging at the same time.

**Crossing Borders, Making Connections**-Allison Burkette 2021-01-18 This edited volume explores the scope of interdisciplinary linguistics and includes voices from scholars in different disciplines within the social sciences and humanities, as well as different sub-disciplines within linguistics. Chapters within this volume offer a range of perspectives on interdisciplinary studies, represent a connection between different disciplines, or demonstrate an application of interdisciplinarity within linguistics. The volume is divided into three sections: perspectives, connections, and applications. Perspectives The goal of this section is to address more generally the definition(s) of and value of multi-, trans-, and inter-disciplinary work. In what areas and for what purposes is there a need for work that crosses discipline boundaries? What are the challenges of undertaking such work? What opportunities are available? Connections This section features paired chapters written by scholars in different disciplines that discuss the same concept/idea/issue. For example, a discussion of how "assemblage" works in archaeology is paired with a discussion of how "assemblage" can be used to talk about ‘style’ in linguistics. Applications This section can be framed as sample answers to the question: What does interdisciplinarity look like?
Global Perspectives on Eco-Aesthetics and Eco-Ethics-Krishanu Maiti 2019-12-31 Global Perspectives on Eco-Aesthetics and Eco-Ethics: A Green Critique focuses on the interface of the Anthropocene, sustainability, ecological aesthetics, multispecies relationality, and the environment as reflected in literature and culture. This book examines how writers have addressed ecological crises and environmental challenges that transcend national, cultural, political, social, and linguistic borders. It demonstrates how, as the environmental humanities developed and emerged as a critical discipline, it generated a diverse range of interdisciplinary fields of study such as ecographics, ecodesign, ecocinema, ecotheology, ecofeminism, ethnobotany, ecolinguistics, and bioregionalism, and formed valuable, interdisciplinary networks of critique and advocacy—and its contemporary expansion is exceptionally salient to social, political, and public issues today.

The Cambridge Handbook of Endangered Languages-Peter K. Austin 2011-03-24 It is generally agreed that about 7,000 languages are spoken across the world today and at least half may no longer be spoken by the end of this century. This state-of-the-art Handbook examines the reasons behind this dramatic loss of linguistic diversity, why it matters, and what can be done to document and support endangered languages. The volume is relevant not only to researchers in language endangerment, language shift and language death, but to anyone interested in the languages and cultures of the world. It is accessible both to specialists and non-specialists: researchers will find cutting-edge contributions from acknowledged experts in their fields, while students, activists and other interested readers will find a wealth of readable yet thorough and up-to-date information.

The Handbook of Educational Linguistics-Bernard Spolsky 2010-02-01 The Handbook of Educational Linguistics is a dynamic, scientifically grounded overview revealing the complexity of this growing field while remaining accessible for students, researchers, language educators, curriculum developers, and educational policy makers. A single volume overview of educational linguistics, written by leading specialists in its many relevant fields Takes into account the diverse theoretical foundations, core themes, major findings, and practical applications of educational linguistics Highlights the multidisciplinary reach of educational linguistics Reflects the complexity of this growing field, whilst remaining accessible to a wide audience

Research Methodology In Linguistics And Education-Selviana Napitupulu 2019-09-01 How do you gain knowledge? Is it from watching videos, reading books or articles from internet? Is it from your family, friends, teachers, professors? Is from your own feelings? There are many ways of collecting and obtaining knowledge and as human living in the era of 4.0 nowadays, myriad knowledge sources are viral in every place, in every time. However, how do you know the knowledge, how do you come into a conclusion afrer deepening
your doubt and curiosity?

ICTMT 2019-Sharina Osman 2019-08-19 The 1st International Conference on Tourism, Management and Technology is motivated by improving the quality of research and development relating to tourism, management and technology fields. Thus, this conference has aims: (1) to bring together the scientists, researchers and practitioners, and lecturers. (2) To share and to discuss theoretical and practical knowledge about innovation in tourism, management and technology fields. The conference took place in Universiti Kuala Lumpur, Malaysia, on August, 17th 2019. There are 34 papers that are participated from various topics. The conference involves tourism, management and technology fields, such as; Media and Technology in Tourism, Innovation in Tourism, The Theoretical Perspective on Tourism, Sustainable Tourism, Gender and Diversity Issue in Tourism, Technology and Management on Tourism, Law in Tourism, Health Tourism, Tourism Policy and Planning, Tourism and Environment, Finance in Tourism. Specifically, this conference can be used as a scientific forum for accommodating discussion among young researchers that originated from Indonesia in the field of Tourism, Management and Technology. Therefore, the invited speakers in this conference are the researchers that are well-known and reputable in the world. We would like to thank the organizing committee and the members of reviewers for their kind assistance in reviewing the papers. We would also extend our best gratitude to keynote speakers for their invaluable contribution and worthwhile ideas shared in the conference. Furthermore, ICTMT is hoped to be able to be used as academic media to exchange ideas and as a result it will succeed in deciding the recommendation related to the tourism, management and technology phenomenon.

Linguistic Ecology and Language Contact-Ralph Ludwig 2018-12-31 This book revisits and updates the concept of linguistic ecology, outlining applications to a variety of contact situations worldwide.

Towards the Ecology of Human Communication-Marta Boguslawska-Tafelska 2015-10-13 There is undoubtedly considerable intellectual and methodological progress evident in approaches to linguistics, from systemic and formal methods, to post-Newtonian transpersonal, non-local models of meaning co-creation built within contemporary language studies. Indeed, such changes are constant – the 20th century product orientation of linguistic research is currently being complemented by ecolinguistic processes, with the linearity of scientific perception and treatment being replaced by the dynamic and multispectral approach of “ecological” theory. This book provides a richly detailed analysis of this profound shift within contemporary language and communication research. A particularly interesting facet of this volume is the proposal that the architecture of the human organism is, transpersonally, in constant relation with its immediate surroundings, as well as with non-local multilevel surroundings. This connection is based not only on the cognitive
connection of minds or neurocognitive contacts with the nervous and sensual systems of communicators, but on the multidimensional relationship between the manifold communicative modalities living systems possess. Human communication is embedded within a given local communicative situation, as well within the global, non-local environment via the basic ontology of entanglement. The human communicative process is always evolving as a result of the constant fluctuations of life processes. Indeed, the conclusions presented in this volume open up a new approach to present-day linguistics, that human language is an essential life process.

**Contact Languages** - Umberto Ansaldo 2009-10-15 This book explores the social and structural dynamics underlying the creation of new, or restructured, grammars, offering an evolutionary account of contact language formation in the linguistic ecology of Monsoon Asia, including contacts between languages and peoples of Malay, Chinese, Portuguese and English origin, before, during and after Western colonization.

**Integral Ecology** - Sean Esbjorn-Hargens, Ph.D. 2011-03-08 Today there is a bewildering diversity of views on ecology and the natural environment. With more than two hundred distinct and valuable perspectives on the natural world—and with scientists, economists, ethicists, activists, philosophers, and others often taking completely different stances on the issues—how can we come to agreement to solve our toughest environmental problems? In response to this pressing need, Integral Ecology unites valuable insights from multiple perspectives into a comprehensive theoretical framework—one that can be put to use right now. The framework is based on Integral Theory, as well as Ken Wilber’s AQAL model, and is the result of over a decade of research exploring the myriad perspectives on ecology available to us today and their respective methodologies. Dozens of real-life applications and examples of this framework currently in use are examined, including three in-depth case studies: work with marine fisheries in Hawai’i, strategies of eco-activists to protect Canada’s Great Bear Rainforest, and a study of community development in El Salvador. In addition, eighteen personal practices of transformation are provided for you to increase your own integral ecological awareness. Integral Ecology provides the most sophisticated application and extension of Integral Theory available today, and as such it serves as a template for any truly integral effort.

**Communication as a Life Process, Volume Two** - Marta Bogusławska-Tafelska 2019-05-01 This volume is a collection of texts authored by an international team of linguistic scholars who provide their response to the concept of 21st century holism in language studies. The expertise of its contributors is reflected in the thematic scope of the book; it discusses topics such as the concept of harmony in interpersonal communication, semiotic and cultural phenomena handled by discourse analysis, selected aspects of religious discourse, and the study of proverbs or educational processes, to name but a few. 21st century holism embraces a solid theoretical base in post-
Newtonian physics (quantum theory in particular), and departs from materialistic and atomistic perspectives based on Darwinism or cognitivism, however tempted we may be to allow the inertia of these in Western science and culture. Once a scholar decides to shift their paradigmatic perspective, thinking style, and research methodology, they start to co-build a collective mental representation herein referred to as ‘the culture of consciousness’.

**Storytelling and Ecology**-Anthony Nanson 2021-06-17 Linking the ongoing ecological crisis with contemporary conditions of alienation and disenchantment in modern society, this book investigates the capacity of oral storytelling to reconnect people to the natural world and enchant and renew their experience of nature, place and their own existence in the world. Anthony Nanson offers an in-depth examination of how a diverse ecosystem of oral stories and the dynamics of storytelling as an activity can catalyse different kinds of conversation and motivation, helping us resist the discourse of powerful vested interests. Detailed analysis of traditional, true-life and fictional stories shows how spoken narrative language can imbue landscapes, creatures and experiences with enchantment and mediate between the inner world of consciousness and outer world of ecology and community. A pioneering ecolinguistic and ecocritical study of oral storytelling in the modern world, Storytelling and Ecology offers insight into the ways that sharing stories in each other's embodied presence can open up spaces for transformation in our relationships with the ecological world around us.

**Language as a Local Practice**-Alastair Pennycook 2010-04-05 Language as a Local Practice addresses the questions of language, locality and practice as a way of moving forward in our understanding of how language operates as an integrated social and spatial activity. By taking each of these three elements - language, locality and practice - and exploring how they relate to each other, Language as a Local Practice opens up new ways of thinking about language. It questions assumptions about languages as systems or as countable entities, and suggests instead that language emerges from the activities it performs. To look at language as a practice is to view language as an activity rather than a structure, as something we do rather than a system we draw on, as a material part of social and cultural life rather than an abstract entity. Language as a Local Practice draws on a variety of contexts of language use, from bank machines to postcards, Indian newspaper articles to fish-naming in the Philippines, urban graffiti to mission statements, suggesting that rather than thinking in terms of language use in context, we need to consider how language, space and place are related, how language creates the contexts where it is used, how languages are the products of socially located activities and how they are part of the action. Language as a Local Practice will be of interest to students on advanced undergraduate and post graduate courses in Applied Linguistics, Language Education, TESOL, Literacy and Cultural Studies.
Language Policy and Language Planning - Sue Wright 2016-04-08 This revised second edition is a comprehensive overview of why we speak the languages that we do. It covers language learning imposed by political and economic agendas as well as language choices entered into willingly for reasons of social mobility, economic advantage and group identity.

University Initiatives in Climate Change Mitigation and Adaptation - Walter Leal Filho 2018-06-18 This book focuses on the role of higher education institutions in addressing climate change mitigation and adaptation challenges, contributing to the development of this fast-growing field. Further, it includes the results of empirical research and offers ideas regarding on-going and future research initiatives. The contributions also • showcase the research and projects on issues pertaining to climate change at universities from across the globe; • document and promote ideas and experiences acquired in the execution of research projects, especially successful initiatives and best practices; and • introduce methodological approaches and projects that offer a better understanding of climate change across society and economic sectors. The book is structured around two parts: lessons learned from climate change research, education, studies and projects. Each part focuses on mitigation and adaptation respectively, with many responses of the two modalities overlapping. This book is a valuable resource for researchers and practitioners in the fields of environment, human geography, business and economics, as well as academics and students, as it presents education, communication and awareness-raising projects on matters related to climate change at universities in both industrialised and developing countries, often in cooperation with government bodies, NGOs and other stakeholders.

Cultivating Sustainability in Language and Literature Pedagogy - Roman Bartosch 2021-03-29 This book introduces the notion of "educational ecology" as a necessary and promising pedagogic principle for the teaching of Anglophone literatures and cultures in a time of climate change. Drawing on scholarship in the environmental humanities and practice-oriented research in education and literature pedagogy, chapters address the challenges of climate change and the demand for sustainability and environmental pedagogy from the specific perspective of literary and cultural studies and education, arguing that these perspectives constitute a crucial element of the transdisciplinary effort of "cultivating sustainability." The notion of an "educational ecology" takes full advantage of the necessarily dialogic and co-constitutive nature of sustainability-related pedagogical philosophy and practice while it retains the subject-specific focus of research and education in the humanities, centring on and excelling in critical thinking, perspective diversity, language and discourse awareness, and the literary and cultural constructions of meaning. This book will be of great interest to academics, researchers and postgraduate students in the fields of language, literature and culture pedagogy, as well as transdisciplinary researchers in the environmental humanities.
Education for Sustainable Development in Foreign Language Learning - María J. de la Fuente 2021-11-29 This unique volume utilizes the UNESCO Education for Sustainable Development (ESD) framework to illustrate successful integration of sustainability education in post-secondary foreign language (FL) learning. Showcasing a variety of approaches to using content-based instruction (CBI) in college-level courses, this text valuably demonstrates how topics relating to environmental, social, and cultural dimensions of sustainability can be integrated in FL curricula. Chapters draw on case studies from colleges throughout the US and consider theoretical and practical concerns relating to models of sustainability-based teaching and learning. Chapters present examples of project-, problem-, and task-based approaches, as well as field work, debate, and reflective pedagogies to enhance students’ awareness and engagement with sustainable development issues as they acquire a foreign language. Insights and recommendations apply across languages and highlight the potential contribution of FL learning to promote sustainability literacy amongst learners. This text will benefit researchers, academics, and educators in higher education with an interest in Modern Foreign Languages, sustainability education, training, and leadership more broadly.

Ecology and the Literature of the British Left - H. Gustav Klaus 2016-04-29 Premised on the belief that a social and an ecological agenda are compatible, this collection offers readings in the ecology of left and radical writing from the Romantic period to the present. While early ecocriticism tended to elide the bitter divisions within and between societies, recent practitioners of ecofeminism, environmental justice, and social ecology have argued that the social, the economic and the environmental have to be seen as part of the same process. Taking up this challenge, the contributors trace the origins of an environmental sensibility and of the modern left to their roots in the late eighteenth and early nineteenth centuries, charting the ways in which the literary imagination responds to the political, industrial and agrarian revolutions. Topics include Samuel Taylor Coleridge’s credentials as a green writer, the interaction between John Ruskin’s religious and political ideas and his changing view of nature, William Morris and the Garden City movement, H. G. Wells and the Fabians, the devastated landscapes in the poetry and fiction of the First World War, and the leftist pastoral poetry of the 1930s. In historicizing and connecting environmentally sensitive literature with socialist thought, these essays explore the interactive vision of nature and society in the work of writers ranging from William Wordsworth and John Clare to John Berger and John Burnside.

**Social Sciences for an Other Politics**-Ana Cecilia Dinerstein 2017-01-20 This book opens up a unique intellectual space where eleven female scholar-activists explore alternative forms of theorising social reality. These ‘Women on the Verge’ demonstrate that a new radical subject- one that is plural, prefigurative, decolonial, ethical, ecological, communal and democratic- is in the making, but is unrecognisable with old analytical tools. Of central concern to the book is the resistance of some social scientists, many of them critical theorists, to learning about this radical subject and to interrogating the concepts, methodologies and epistemologies used to grasp it. Echoing the experiential critique of capitalist-colonial society that is taking place at the grassroots, the authors examine how to create hope, decolonise critique and denaturalise society. They also address the various dimensions of the social (re)production of life, including women in development, the commons, and nature. Finally, they discuss the dynamics of prefiguration by social movements, critiquing social movement theory in the process. This thought-provoking edited collection will appeal to students and scholars of gender studies, social, Marxist and Feminist theory, postcolonial studies and politics.

**African Languages in a Digital Age**-Don Osborn 2010 Offering practical approaches to finding a place for African languages in the information revolution, this overview lays the foundation for more effectively bridging the "digital divide" by finding new solutions to old problems. Conducted by the PanAfrican Localization project under the sponsorship of Canada’s International Development Research Center, this survey explores obstacles that impede greater use of African languages in computer software and internet content, assesses possible solutions and maps for their reach, and identifies future trends in the field. Among the key issues discussed are the importance of localization in the African context; barriers to more widespread use of African languages in internet computer technology; and by whom, for which languages, and in which countries efforts are being made. Central to the discussion is the introduction of the concept of "localization ecology" to account for the key factors, facilitate discussion of their interaction, and call attention to how planning and implementing localization can and should consider these issues.
Teaching Climate Change in the Humanities  

Stephen Siperstein 2016-10-04  
Climate change is an enormous and increasingly urgent issue. This important book highlights how humanities disciplines can mobilize the creative and critical power of students, teachers, and communities to confront climate change. The book is divided into four clear sections to help readers integrate climate change into the classes and topics they are already teaching as well as engage with interdisciplinary methods and techniques. Teaching Climate Change in the Humanities constitutes a map and toolkit for anyone who wishes to draw upon the strengths of literary and cultural studies to teach valuable lessons that engage with climate change.
