Biochemistry, Fifth Edition-Jeremy M. Berg 2002-02-15 This book is an outgrowth of my teaching of biochemistry to undergraduates, graduate students, and medical students at Yale and Stanford. My aim is to provide an introduction to the principles of biochemistry that gives the reader a command of its concepts and language. I also seek to give an appreciation of the process of discovery in biochemistry.

Concepts of Biology-Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Student Companion for Biochemistry: A Short Course-John L. Tymoczko 2019-07-31 Biochemistry is very time-consuming, and spending only one or two nights studying for an exam is a recipe for disaster. This Companion is designed to help students cope with the volume of detail in a biochemistry course. It is carefully arranged so that the material matches the content of Biochemistry: A Short Course, Fourth Edition. Each chapter in this Companion consists of an Introduction, Learning Objectives, a Self-Test, Answers to Self-Test, Problems, and Answers to Problems.

Principles of Bioinorganic Chemistry-Stephen J. Lippard 1994 As one of the most dynamic fields in contemporary science, bioinorganic chemistry lies at a natural juncture between chemistry, biology, and medicine. This rapidly expanding field probes fascinating questions about the uses of metal ions in nature. Respiration, metabolism, photosynthesis,

gene regulation, and nerve impulse transmission are a few of the many natural processes that require metal ions, and new systems are continually being discovered. The use of unnatural metals - which have been introduced into human biology as diagnostic probes and drugs - is another active area of tremendous medical significance. This introductory text, written by two pioneering researchers, is destined to become a landmark in the field of bioinorganic chemistry through its organized unification of key topics. Accessible to undergraduates, the book provides necessary background information on coordination chemistry, biochemistry, and physical methods before delving into topics that are central to the field: What metals are chosen and how are they taken up by cells? How are the concentrations of metals controlled and utilized in cells? How do metals bind to and fold biomolecules? What principles govern electron transfer and substrate binding and activation reactions? How do proteins fine-tune the properties of metals for specific functions? For each topic discussed, fundamentals are identified and then clarified through selected examples. An extraordinarily readable writing style combines with chapter-opening principles, study problems, and beautifully rendered two-color illustrations to make this book an ideal choice for instructors, students, and researchers in the chemical, biological, and medical communities.

Concepts in Biochemistry-Rodney F. Boyer 2005-11-11 The third edition of Concepts in Biochemistry makes the most applied and accessible biochemistry text on the market. Students are more successful with Boyer because it isn't intimidating and it makes clear the relevance of the material to their future careers. Like the first two editions, Boyer is written for students who need an introduction to the fundamental principles of biochemistry and are preparing for a career in the allied health sciences, the biological sciences, and the environmental sciences. (The text is also appropriate for use in one-semester courses developed for chemistry majors as a result of the new American Chemical Society requirements for three-credit hours of biochemistry coursework.) The modern, student-friendly organization sets the book apart from the competition because the early placement of nucleic acids enhances the traditional coverage of protein structure and function, and metabolism. As an example, it is now possible to present metabolism in a more contemporary fashion, emphasizing gene regulation and integration. Rod Boyer is a recently retired Professor of Chemistry and Biochemistry at Hope College in Holland, Michigan. He has a PhD from Colorado State and recently spent a sabbatical year at Nobel Prize winner Tom Cech's lab at the University of Colorado. He is on the Editorial Board for the journal, Biochemistry and Molecular Biology Education and has been very active in education affairs

for the American Society for Biochemistry and Molecular Biology.
