by Larry Witham (2013-10-06)

For the first time, leading religion scholar Larry Witham explores the relationship between economics and religion, finding that the market has played a powerful role in both the development and the decline of religious institutions. Drawing on a range of case studies, he shows that economics and religion are deeply intertwined, with economic factors often shaping religious belief and practice, and vice versa. Witham argues that the market has both helped and harmed religious institutions, and that an understanding of the economic context of religious institutions is essential for understanding their role in society.

The book begins with an overview of the history of the relationship between economics and religion, from ancient times to the present day. It then moves on to consider the ways in which economics has influenced religious institutions, including the role of religion in the development of capitalism and the influence of religious organizations on the economy.

Witham also explores the ways in which religious institutions have responded to economic challenges, including the rise of secularization and the collapse of traditional religious institutions. He argues that religious institutions must adapt to the changing economic environment, and that they can do so by embracing the principles of the market.

Throughout the book, Witham offers a rich and nuanced picture of the relationship between economics and religion, and he demonstrates the importance of understanding the economic context of religious institutions. This book is a must-read for anyone interested in the intersection of economics and religion.
