Harry Stack Sullivan-F. Barton Evans III 2006-09-21 Harry Stack Sullivan (1892-1949) has been described as 'the most original figure in American psychiatry'. Challenging Freud's psychosexual theory, Sullivan founded the interpersonal theory of psychiatry, which emphasized the role of interpersonal relations, society and culture as the primary determinants of personality development and psychopathology. This concise and coherent account of Sullivan's work and life invites the modern audience to rediscover the provocative, groundbreaking ideas embodied in Sullivan's interpersonal theory and psychotherapy.

Interpersonal Relations In Nursing-Hildegard E. Peplau, RN 1991-06-20 Originally published in 1952 by a towering figure in nursing history, this book stresses the then novel theory of interpersonal relations as it was relevant to the work of nurses. Her framework suggested that interaction phenomena that occur during patient-nurse relationships have qualitative impact on patient outcomes. While the past four decades have seen a substantial expansion in the use and understanding of interpersonal theory, such as cognitive development and general systems theory, this classic book remains a useful foundation for all nurses as so much subsequent work used this work as its starting point. Springer Publishing Company is delighted to make this book available again.

**Schizophrenia as a Human Process**-Harry Stack Sullivan 1962 Amongst clinicians, Sullivan is probably best known for his early work with schizophrenics at the Sheppard and Enoch Pratt Hospital in Towson, Maryland. Yet this fame has been largely legendary, since the only full record of this work is found scattered through various professional journals and monographs published more than twenty-five years ago and in an unpublished book written in the thirties, Personal Psychopathology. In this present book of selected papers, the author has tried to reconstruct this work by bringing together what he considers to be the most crucial of these papers.

Interpersonal Psychiatry-P. Mullahy 2012-12-06 An impressive amount of work, experimental, statistical and "observational" or "phenomenological" has been done in psychiatry during the past 30 to 40 years. Although Sullivan's achievements have placed him in the first rank of psychiatry, some of the work done since he died in 1949 can be assimilated to enhance his achievements. For this reason, I enlisted the aid of Menachem Melinek, M.D., whose wide knowledge of recent and contemporary psychiatric studies is admirably suited to the task of assimilating some of them to Sullivan's theories. PATRICK MULLAHY Acknowledgments The authors wish to acknowledge with gratitude Mrs. Mari Hughes, formerly secretary, Department of Psychology, Manhattan College, for typing the original manuscript. Dr. Robert G. Kvarnes of the Washing ton School of Psychiatry, read the original manuscript and contributed several keen criticisms and suggestions for which we are grateful. We wish to express our thanks to the Department of Psychiatry, at Montefiore-North Central Bronx Hospitals for the support in preparing the final manuscript of the book. Robert Steinmuller, Director of Psychiatry at North Central Bronx Hospital was generous with his help. We would like as well to acknowledge the support of the Department of Psychiatry at Bronx-Lebanon Hospital Center and its Director of Psychiatry, Dr. Harvey Bluestone.

Psychodynamic Therapy for Personality Pathology-Eve Caligor 2018-04-17 Deftly combining contemporary theory with clinical practice, Psychodynamic Therapy for Personality Pathology: Treating Self and Interpersonal Functioning is an invaluable resource for any clinician seeking a coherent model of personality functioning and pathology, classification, assessment, and treatment. This insightful guide introduces Transference-Focused Psychotherapy -- Extended (TFP-E), a specialized but accessible approach for any clinician interested in the skillful treatment of personality disorders. Compatible with the DSM-5 Section III Alternative Model for Personality Disorders -- and elaborating on that approach, this volume offers clinicians at all levels of experience an accessible framework to guide evaluation and treatment of personality disorders in a broad variety of clinical and research settings. In this book, readers will find: A coherent model of personality functioning and disorders based in psychodynamic object relations theory A clinically near approach to the classification of personality disorders, coupled with a comprehensive approach to assessment An integrated
treatment model based on general clinical principles that apply across the spectrum of personality disorders. An understanding of specific modifications of technique that tailor intervention to the individual patient's personality pathology. Descriptions of specific psychodynamic techniques that can be exported to shorter-term treatments and acute clinical settings. Patient assessment and basic psychodynamic techniques are described in up-to-date, jargon-free terms and richly supported by numerous clinical vignettes, as well as online videos demonstrating interventions. At the end of each chapter, readers will find a summary of key clinical concepts, making this book both a quick reference tool as well as a springboard for continued learning. Clinicians looking for an innovative, trustworthy guide to understanding and treating personality pathology that combines contemporary theory with clinical practice need look no further than Psychodynamic Therapy for Personality Pathology: Treating Self and Interpersonal Functioning.

**Personality Structure and Human Interaction** Harry Guntrip 2017-09-16 Excerpt from Personality Structure and Human Interaction: The Developing Synthesis of Psycho-Dynamic Theory

This book is not intended to be a history of psycho-analytical theory. In any complete form that would be a far larger undertaking. Many important aspects of theory here omitted would have called for inclusion, particularly in the case of Freud and Melanie Klein. I have attempted something different, something that I believe needs to be done at about this time, something that arises as a problem out of the very nature of science as hitherto understood, as soon as it comes to be applied to human beings. This involves making a historical survey, and I have sought to let the important writers speak for themselves. The justification for fairly frequent quotations and some lengthy ones must be found in this deliberate purpose. But such a survey would be mere mechanical hackwork, more or 1685 complete recording, unless the writer felt he could trace the emergence of deeper understanding along certain definite lines. The close study of psycho-analysis over many years, against the background of philosophical, religious, literary and social studies, has bred in me the conviction that here at last, and here alone, scientific enquiry has come face to face with the intimate and fully 'personal' life of man. This constitutes as big a test for science as for man. Science has to discover whether and how it can deal with the 'person', the 'unique individual', we will dare to say the 'spiritual self' with all the motives, values, hopes, fears and pur poses that constitute the real life of man, and make a purely 'organic' approach to man inadequate. On the other hand, man has to face the most penetrating searchlight focussed upon his essential nature, and must find out how to adjust to the stripping off of his psychic defences and self-deceptions, built up to hide failures in development towards maturity, while the struggle to cope with living in spite of immaturity is carried on. How Humans Relate- John Birtchnell 1996 In this book, John Birtchnell offers a new theory as the basis for a science of relating. While links can be made between it and classical interpersonal theory, it has many new and original features.; The theory states that the relating of humans must have evolved out of, and be in continuity with, the relating of all other animals. The fundamental relating objective of both humans and animals can most easily be defined Identifying That Basic Framework Of Motives Which Is Common To Both.; Birtchnell proposes that such a framework is best constructed around two major axes, a horizontal one concerning the degree to which we need to become involved with or separated from others, and a vertical one concerning the degree to which we choose to exercise power over others or permit others to exercise their power over us. We differ from other animals in the horizontal axis in the extent to which we have expanded our proclivity for close involvement, and on the vertical axis in the extent to which we have become prepared to utilize such forms of power as we have, or have acquired, for the benefit of others. As a consequence of our greater involvement, we are capable of being concerned about and respectful of the needs of others, and trusting of those who are prepared to utilize their power for our benefit, though we remain capable of being disrespectful and non-trusting.; The four objectives derived from the proposed framework are called closeness, distance, upperness and lowerness, and a large part of the book is devoted to describing their characteristics. The book also explores the use of the framework as a means of classifying personality disorders and mental illness.; This book shoud be of interest to professionals and students interested in human relationships, including psychiatrists, clinical and social psychologists, and psychotherapists.

Psychiatric-Mental Health Nursing- Jeffrey S Jones, DNP, PMHCNS, BC, LNC 2012-03-16 This psychiatric-mental health undergraduate textbook, based on the theories of Hildegard Peplau and Joyce Travelbee, is the first recent book devoted to interpersonal relations as the foundation for therapeutic practice in psychiatric nursing. It guides the student through the essential phases of self-discovery necessary to integrate interpersonal nursing theory into practice, and provides a historical overview of the profession. The book addresses the most current ISPN and APNA competencies and presents content designed to foster self-growth, and critical thinking and decision-making skills, as well as to implement therapeutic interventions. It offers an overview of theories of mental illness and a detailed discussion of commonly seen psychiatric disorders, and addresses mental health care settings across the lifespan and different
populations. Clinical case studies and first-hand accounts vividly describe the realities of living with specific mental illnesses, "What would you do?" questions stimulate discussions, and sample and practice care plans for chronic mental illness facilitate integration of concepts into practice. Evidence-based practice summaries from psychiatric nursing and related research literature are included, and NANDA guidelines are integrated throughout. A new chapter with DSM-V updates is also available. This affordably priced text additionally comes with supplementary materials for both teachers and students, including handy review guides, summaries, drug monographs, and hyperlinks to films and video illustrating content. A test bank and PowerPoint slides are also available for instructors.

Key Features:

The Interpersonal Tradition - Irwin Hirsch 2014-09-19 In The Interpersonal Tradition: The Origins of Psychoanalytic Subjectivity, Irwin Hirsch offers an overview of psychoanalytic history and in particular the evolution of Interpersonal thinking, which has become central to much contemporary psychoanalytic theory and practice. This book of Hirsch’s selected papers provides an overview of his work on the topic over a thirty year period (1984-2014), with a new introductory chapter and a brief updating prologue to each subsequent chapter. Hirsch offers an original perspective on clinical psychoanalytic process, comparative psychoanalysis and psychoanalytic theory, particularly explicating the many ways in which Interpersonal thinking is absolutely central to contemporary theory and practice. Each chapter is filled with theoretical explication and clinical examples that illustrate the degree to which the idiosyncratic person of each psychoanalyst inevitably plays a significant role in both analytic praxis and analytic theorizing. Key to this perspective is the recognition that each unique individual analyst is an inherently subjective co-participant in all aspects of analytic process, underscoring the importance that analysts maintain an acute sensitivity to the participation of both parties in the transference-countertransference matrix. Overall, the book argues that the Interpersonal psychoanalytic tradition, more than any other, is responsible for the post-modern and Relational turn in contemporary psychoanalysis. Based on a range of seminal papers that outline how the Interpersonal psychoanalytic tradition is integral to understanding much of contemporary psychoanalytic thought, this book will be essential reading for practitioners and students of psychoanalysis.
**Brief Dynamic Interpersonal Therapy**-Alessandra Lemma 2011-06-16 Dynamic Interpersonal Therapy (DIT) is a brief psychodynamic psychotherapy developed for the treatment of mood disorders.
