Health Care and EU Law Johan Willem van de Gronden 2011-05-18 The EU has only limited competence to regulate national health-care systems but recent developments have shown that health care is not immune from the effects of EU law. As Member States have increasingly experimented with new forms of funding and the delivery of health-care and social welfare services, health-care issues have not escaped scrutiny from the EU internal market and from competition and procurement rules. The market-oriented EU rules now affect these national experiments as patients and health-care providers turn to EU law to assert certain rights. The recent debates on the (draft) Directive on Patients’ Rights further underline the importance, but also the difficulty (and controversy), of allowing EU law to regulate health care. The topicality of the range of issues related to health care and EU law was addressed, in October 2009, at a conference held in Nijmegen, The Netherlands. The present volume contains inter alia the proceedings of this conference and invited essays. This volume focuses on EU law and EU legislation in health-care issues.

The Autonomous Child Ivar Frones 2015-10-14 The social sciences offer a variety of theories on how children develop, and various theories and disciplines apply their own vocabularies and conceptualise different aspects of the processes of socialization. This book looks at the theorizing of socialization in sociology, anthropology, psychology, in the life course approach, and as the interplay of genetics and environmental factors. It analyses the dominant perspectives and viewpoints within each discipline and field, and shows how the various theories and disciplines apply their own vocabularies and conceptualise different aspects of the processes of socialization. It argues that socialization does not represent a fixed trajectory into a static social order, and that different disciplines meet the challenges of complex developmental processes and changing environments in different ways. Socialization is a fundamental concept in sociology, but sociology has only to a limited degree sought to produce a coherent understanding of the processes of socialization, which has to encompass the interplay of societal, psychological and genetic factors. This book draws the threads together and, by doing so, offers a general framework for our understanding of the socialization process. At the centre of this process is the child as a subject, in an interplay with the patterns and significant others of the micro environment as well as with the macro-conditions of the modern knowledge based economies.

When the Innocent are Punished Peter Scharf Smith 2014-06-19 There are millions of children experiencing parental imprisonment worldwide, but up until recently very little attention has been given to this issue and the serious intergenerational effects of imprisonment. This book tells the story of prisoner's children -- of their situation, problems and human rights - and how they are treated throughout the justice process from the arrest of a parent to imprisonment and release. Based on extensive research from across Europe, Scharff Smith argues that it is a paradox that we hail the family as a fundamental unit in our societies, and insist on regarding children as an especially valuable and vulnerable group of citizens, but at the same time break up families on a massive scale as a result of a conscious, planned and generally unquestioned policy of using imprisonment as a key sanction in the repertoire of punishments. Shedding light on various reform initiatives, this book assists in promoting good practice and improving the experience of children of imprisoned parents.

Oral Implantology Surgical Procedures Checklist Louie Al-Faraje 2013-01-01 Just as checklists used in the aviation industry dramatically reduce the incidence of human error and provide higher safety and success margins, implant surgery should start with a thorough presurgery check by the surgeon. Surgeons have relied solely on memory for these checks, but the complexity of the information regarding the procedures of today makes it difficult to properly deliver it to patients in a consistent, correct, and safe manner. This checklist booklet outlines the proper sequence for surgical procedures, details the setups for necessary instruments, provides postoperative instructions, and even includes a clear roadmap to follow in emergency scenarios that might be encountered during or after surgery. It offers the implant surgeon a standardized approach to ensure that surgical procedures run smoothly and that an extra margin of safety is respected at all times. A built-in collapsible stand facilitates viewing in the treatment room. Washable pages make this book usable even in sterile environments, and when written on in ballpoint pen, the ink can be easily erased with an alcohol wipe.

Cancer Biomarkers Anne Blanchard 2017-04-12 Cancer care is undergoing a shift from a 'one-size-fits-all' approach to more personalised medicine. One way of personalising cancer treatments is through biomarkers: molecules or biochemical changes found in the patient's tissues and body fluids. This book reflects upon the promise of cancer biomarkers and asks questions such as: How may the complexity of cancer biology impede the robustness of biomarkers in the clinic? How should one draw the line between the various sub-groups of patients for personalised treatment? How can one evaluate the cost-effectiveness and fairness of personalised cancer treatments?

By bringing together authors from the fields of science and technology studies, medical ethics and philosophy, health economics and oncology, the book aims to give a critical yet accessible overview of some of the key social, ethical and economic issues that surround cancer biomarkers. "The book should be required reading for oncologists, medical students, graduate students and especially for those who make policy decisions regarding the use and reimbursement of cancer biomarkers." - Bruce Zetter, Charles Nowiszewski Professor of Cancer Biology in the Department of Surgery, Harvard Medical School

Toward the Light Johanne Agerkov 1979 The sub-title of this deeply moving and compelling work defines it as a message to mankind from the transcendental world thus placing it firmly among the very few books which are held to be of supernatural origin. 'Toward the Light' is about love and forgiveness. It is about peace and the unification of a divided humanity, and about achieving a more complete understanding of ourselves. For some this book will be controversial reading. It explains such things as the true nature of Good and Evil; the mystery of Reincarnation; and the consequences of the Law of Reciprocal Action (The Law of Karma). It answers theological questions such as how can we reconcile belief in God who is all-good and all-powerful with the existence of a world that contains so much that is incontestably evil? It is, quite simply, a work of revealed knowledge that bears on the fundamental problems of life -- and upon the reality of death. The book offers a message to all -- regardless of race, religion or creed. All that is asked is that the reader should keep an open mind and be guided by his or her conscience. That being the case, 'Toward the Light' will illuminate the spirit of all who open themselves to its message, for its message is truly a gift of love to every human being.

**The Politics of Europeanisation** Kevin Featherstone 2003-06-05 'The Politics of Europeanisation' looks at the political aspects of European integration from the point of view of domestic politics. In doing so, it goes beyond the classic analysis of 'how policies are made in Brussels' and raises instead the question 'what is the power of Europe in national contexts?'. The questions at the heart of this volume are crucial both for our understanding of European integration and for their policy implications. What does Europeanisation really mean? How can it be measured? How is the European Union affecting domestic politics and policies in member states and candidate countries?

Is Eurointegration an irreversible process? Does it mean convergence across Europe? How and why do differences persist? Eurointegration: Myths and Realities - Europe's Future? by providing theoretical and empirical perspectives on domestic politics and institutions, government and administration, public policies, political actors and business groups. **Small Places, Large Issues** Thomas Hylland Eriksen 2015 Du site de l'éditeur: This concise introduction to social and cultural anthropology has become a modern classic, revealing the rich global variation in social life and culture. The text provides a clear overview of anthropology, focusing on central topics such as kinship, ethnicity, ritual and political systems, offering a wealth of examples that demonstrate the enormous scope of anthropology and the importance of a comparative perspective. Unlike other texts on the subject, Small Places, Large Issues incorporates the anthropology of complex modern societies. Using reviews of key monographs to illustrate his argument, Eriksen's lucid and accessible text remains an established introductory text in anthropology. This new edition is updated throughout and increases the emphasis on the interdependence of human worlds. There is a new discussion of the influence of cultural studies and natural science on anthropology. Effortlessly bridging the perceived gap between 'classic' and 'contemporary' anthropology, Small Places, Large Issues is as essential to anthropology undergraduates as ever.
