Equipping teachers with an appreciation of critical issues in the field and an understanding of the latest developments, this book provides a comprehensive overview of how technology is being used in early childhood education, instructional design technology, special education, and mathematics and science education. From Neurons to Neighborhoods: Division of Behavioral and Social Sciences and Education 2000-11-13 How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, From Neurons to Neighborhoods presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

Transforming the Workforce for Children Birth Through Age 8: National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not as acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. The book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Theory of Mind Development - Virginia Slaughter 2016-11-01 Theory of Mind Development in Context is the first book of its kind to explore how children's environments shape their theory of mind and, in turn, their ability to interact effectively with others. Based on world-leading research, and inspired by the ground-breaking work of Candia Patterson, the original collected chapters demonstrate that children's understanding of other people is shaped by their everyday environment. Specifically, the chapters illustrate how theory of mind development varies with broad cultural context, socioeconomic status, institutional versus home rearing, family size, parent communication style, and aspects of schooling. The volume also features research showing that, by virtue of their condition, children who are deaf or who have an autism spectrum disorder function in environments that differ from those of typical children and this in turn influences their theory of mind. Although much important research has emphasized the role of nature in theory of mind development, this book highlights that children's understanding of other people is nurtured through their everyday experiences and perspectives. This perspective is essential for students, researchers, practitioners and carers to gain a complete understanding of how this fundamental skill develops in humans. The book is invaluable for academic researchers and advanced students in developmental psychology, education, social psychology, cognitive psychology, and the social sciences, as well as practicing psychologists, counselors, and psychiatrists, particularly those who deal with disorders involving social and/or communicative deficits.

Parenting Matters - National Academies of Sciences, Engineering, and Medicine 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€“which includes all primary caregiversâ€“are at the foundation of children’s well-being and healthy development. From birth, children are learning and rely on their parents and other caregivers to provide them with care and protection. For the majority of parents, there may never be more than the earliest years of life, when a child's brain is rapidly developing and when nearly all of his or her experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents’ lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood care, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children; and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents’ use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report marks recommendations directed at stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
