Motion sickness - Wikipedia
Motion sickness occurs due to a difference between actual and expected motion. Symptoms commonly include nausea, vomiting, cold feet, headache, sleepiness, loss of appetite, and increased salivation. Complications may rarely include delirium, electrolyte problems, or a lower aperistaltic tract. The cause of motion sickness is either real or perceived motion.

The simulation ran for about 15 hours on 7200 nodes of Red Storm and provided approximately 0.65 second of simulated time. The resolution was 1 meter, with a 1 kilometer mesh that contained 1.1 billion cells. The remarkable resolution of this simulation provides moderate in crack formation and propagation not seen in lower-resolution models.

Capillary pressure - Wikipedia
In fluid dynamics, capillary pressure is the pressure between two immiscible fluids in a thin tube (see capillary action), resulting from the interaction of forces between the fluids and solid walls of the tube. Capillary pressure can serve as both an opposing or driving force for fluid transport and is a significant property for research and industrial purposes (such as microfluidic design and analysis).

A Simulation Study on the Growth of Diamond Macros Cells
Sept 15, 2021 - The issue pieces were moved to 15 mL centrifuge tube with a pipette, neutralized with PBS solution, and centrifuged for 5 min at 1,000 rpm, and the supernatant was discarded. A 0.3 mg/mL of type I collagenase (C0103, Sigma) was added for digestion and placed in a 37°C incubator at 50 rpm, until the digestion was complete.

THE BEANS NOT TO BE LOST ON MARS - Great Science 2.0
Aug 14, 2013 - The human body is complex, and impossible to simulate in detail in a computer model. You can’t just draw a straight line from zero g to 1g and interpolate to find the effect of g. Okay all of this is possible, but not very accurate, protection from cosmic radiation, centrifuge sleeping quarters and indeed the whole habitat could be set spinning to.
