The Problem of Social Cost R. H. Coase 2016-10-10 The Problem of Social Cost is an article dealing with economic problem of externalities. It draws from a number of English legal cases and statutes to illustrate Coase's belief that legal rules are only justified by reference to a cost-benefit analysis, and that nuisances that are pure externalities are often not worth the cost of any abatement if the party is more symmetric conflicts between the interests of the two parties.

Social Problems & Social Movements Harry H. Bash 1995 The two sociological fields of Social Problems and Social Movements have been typically disassociated and treated in isolation from each other. Harry Bash traces the development of these sociological specializations and, in doing so, brings together a widely dispersed literature.

Waste Incineration and Public Health National Research Council 2000-10-21 Incineration has been used widely for waste disposal, including household, hazardous, and medical waste—but there is increasing public concern over the benefits of combusting the waste versus the health risk from pollutants emitted during combustion. Waste Incineration and Public Health informs the emerging debate with the most up-to-date information available on incineration, pollution, and human health—along with expert conclusions and recommendations for further research and improvement of such areas as risk communication. The committee provides details on: Processes involved in incineration and how contaminants are released. Environmental dynamics of contaminants and routes of human exposure. Tools and approaches for assessing possible human health effects. Scientific concerns pertinent to future regulatory actions. The book also examines some of the social, psychological, and economic factors that affect the communities where incineration takes place and addresses the problem of uncertainty and variation in predicting the health effects of incineration processes.

The Economics of Social Determinants of Health and Health Inequalities World Health Organization 2013 "This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--Economy and Society Talcott Parsons 1966 Violence and Social Orders Douglass C. North 2009-02-26 This book integrates the problem of violence into a larger framework, showing how economic and political behavior are closely linked.

The Changing Energy Mix Paul Meier 2020-10-06 "The energy mix is changing, and renewable energy is growing in importance. If you were born before 1989, you lived in a U.S. where there was no electricity generated from either wind or solar power and very little from geothermal and biomass. Now, in 2018, the combined generation from wind and solar has surpassed hydroelectricity. Fourteen states now generate more than 10% of their electricity from wind and three generate more than 30%. And bioethanol, produced from corn grain, now makes up 10% of the U.S. gasoline market. Changes have also occurred in the nonrenewable energy mix. Coal, which was responsible for 53% of the U.S. electricity generation in 1998 is now only 28%, as natural gas and nuclear have increased. Coal in 2015 as the primary energy for producing electricity. Similarly, the world did not see any electricity generation from wind until 1983 and none from solar until 1999. Now solar plus wind generate 7% of the worldwide electricity. The worldwide demand for all energy types is also increasing very rapidly, as energy usage has increased 84% over the last twenty years. This book makes a systematic comparison of twelve different energy types to help understand the driving forces for this changing energy mix. Twelve common criteria are used to help create a comparison, such as proven reserves, the levelized cost for each energy type, energy balances, environmental issues, and the energy footprint. Proven reserves are also projected for each renewable energy type"--An Introduction to Sociology Anthony Giddens 2000-04-01 The Solid Facts Richard G. Wilkinson 1996-01-01 World Social Report 2020 Department of Economic and Social Affairs 2020-02-14 This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major megatrends, and their effect on the distribution of access to opportunities, and the distribution of outcomes.

Risk Uncertainty and Social Policy Anthony Barnes Atkinson 1983 The Economics of Social Policy The Economics of Social Policy
The Return of Inequality, acclaimed sociologist Mike Savage pushes back, explaining inequality's profound deleterious effects on the shape of societies. Savage shows how economic inequalities—underpinned by cultural, social, and political factors—constrain the coherence of liberal democracy. Savage guides us through the ideas of leading theorists of inequality, including Marx, Bourdieu, and Piketty, revealing how inequality reimplies the burdens of the past. At once analytically rigorous and passionately argued, Inequality is a vital addition to one of our most important public debates.

Economics of Social Problems

From Individual to Community Rathinasamy Maria Saleth 2012-05-08

From Individual to Community brings together a set of papers that provides critical commentaries on various aspects of inequality. One prominent theme is that concern developing countries—such as globalization, economic growth, rural transformation, gender equality, educational reforms and the Dalit movement—from a multidisciplinary perspective. Based on the theoretical framework of the normative political economy, the authors are critical of the trend of devaluation of the normative political economy and the role of global capital in the economic transformation of the society, with particular relevance in the Indian context—rich versus poor, globalization versus sustainable development, and so on. Devoid of any ideological rigidness, this book is an unbiased exposition of the material as well as ideological positioning of globalization, development and change. This book also commemorates the 125th birth anniversary of Professor Malcolm Adiseshiah, former Deputy Director General of UNESCO and a Padma Bhushan awardee, who was also founder of Madras Institute of Development Studies.

Conflicting Interests

Robert Heiner 2010

A concise, affordable, cutting-edge collection of articles that take a critical constructionist approach to social problems. Conflicting Interests is an engaging and accessible supplement to editor Robert Heiner's textbook, Social Problems: An Introduction to Critical Constructionism, Third Edition. This unique anthology is the only social problems reader in which the majority of the selections reflect the conflict perspective. This approach views social problems as the consequence of social and economic inequalities and therefore encourages students to critically analyze American public policy responses to social problems. Conflicting Interests is organized into five sections: Thinking about Social Problems, The Economics of Inequality, Social Inequalities, Problems of the Family, Crime and Drugs, and Problems of Globalization. Each section presents the current scholarly argument on important economic crisis and the role that the media plays in constructing social problems. In addition, many of the essays describe public policies in countries outside of the United States, providing students with alternative, cross-cultural perspectives and solutions to social problems. Each essay begins with an introduction that briefly summarizes the articles and shows how they are interrelated. Each essay concludes with critical thinking questions that are designed to stimulate class discussion and to help students carefully evaluate the issues.
the decades, and what its strengths and weaknesses are. The book explains why even the best policies and programs, if not well designed and carefully implemented, can fail and determine whether countries can keep borrowing or be thrown into recession.

The book ends by making the case that GDP was a good measure for the twentieth century but is increasingly inappropriate for a twenty-first-century economy driven by innovation, services, and intangible goods.

Political Crises, Social Conflict and Economic Development Andrés Solimano 2005-01-01 Political Crises, Social Conflict and Economic Development is a rare attempt to undertake comparative political analysis of the Andean region and thus represents a welcome contribution... It is clearly written and will engage interested Latin Americanists and even more generalists interested in Latin America. As Jonathon di John, Journal of Agrarian Change This collection of essays on the political economy of the Andean region goes to the heart of the struggle these smaller economies face in completing crucial reforms and achieving higher growth. Andrés Solimano has brought together the best and brightest talent from each country, the result being the most complete list of economic and political development and a historical dependence on primary exports renders these countries distinctly Andean. As the essays argue, the political solutions and economic remedies must address this phenomenon, rather than mimicking those strategies of the larger European countries in the region. Carol Wise, University of Southern California, US The contributors to this authoritative volume analyze the impact of political crises and social conflict on economic performance in the Andean region of Latin America. The blend of theory and case studies is also relevant for other competing societies in the developing world and transition economies. The book provides illuminating insights on how to understand, and survive, the complicated interactions between volatile politics, unstable democracies, violence, social inequality and uneven economic performance. Recent political economy theories are combined with valuable qualitative and quantitative evidence gathered on presidential, regional, and institutional performance, constitutional reforms, quality of institutions, and social inequality and exclusion to understand actual country realities. Part I provides the conceptual framework and a regional perspective of the book. Part II contains five political economy country studies Bolivia, Colombia, Ecuador, Peru, and Venezuela written by leading scholars in the field and former senior policymakers, including a former President. Together, the chapters highlight the detrimental effects of political instability and social conflict on economic growth and stability, as well as the feedback effects from poor economic performance on political instability and institutional fragility. The country studies warn that narrow economic reforms that do not pay adequate attention to politics, institutions and social structures are bound to fail in bringing lasting prosperity and stability to complex societies. Examining new and rich information on episodes of political turmoil, militarizations, constitutional reforms and social uprisings, this book will be required reading for all those interested in the interface of politics and economic development.

The Technology of Our Time Jacques Ellul's The Technological Society has become a classic in its field, laying the groundwork for all other studies of technology and society that have followed. Ellul offers a penetrating analysis of the internal logic of technological civilization. He argues that mankind was not innocent enough as a servant of humankind-threatens to overthrow humanity itself in its ongoing creation of an environment that meets its own ends. No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book. "A magnificent book..." He goes through one human activity after another and shows how it has been transformed by the "tools" of society, a list of which in the final pages includes "models" of the second most important books of the second half of the twentieth-century. In it, Jacques Ellul convincingly demonstrates that technology, which we continue to conceptualize as the servant of man, will overthrow everything that prevents the internal logic of its development, including humanity itself-unless we take some measures to reorient technology to meet the needs of a "servant of humanity," not of the 'economy' in which creating to meet its own needs."—The Nation "A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception, subverting and sucking from these values to produce at last a monolithic world culture in which all non-technological difference and variety are mere appearance."—Los Angeles Free Press Gaining Ground Clifford Winston 2021-08-17 Focusing on ways that market forces work with, rather than against, governments to enhance public welfare. The optimal mix of market forces and government intervention to allocate goods and services in a political environment with shifting pressures to give one approach more responsibility than the other. Current public attitudes toward markets are at a low point in the wake of the Great Recession and the growth in income inequality that began in the 1970s. How can this be the case? Brookings economist Clifford Winston argues that it is a serious mistake to overlook that market failures will be a critical part of the solution to any public objective--whether it be to reduce inequality, stimulate long-term growth, slow climate change, or eliminate COVID 19. In Winston's view, policymakers should be much more aware of the many ways that crises, such as the coronavirus pandemic, have exposed the potential that markets have to provide greater assistance in achieving those goals. Winston synthesizes the empirical evidence on the efficacy of markets in helping to protect consumers against anti-competitive behavior and when technology approaches to address the adverse economic and social problems and could provide specific recommendations to the interface of politics and economic development.

Good Economics for Hard Times Abhijit V. Banerjee 2019-11-12 The winners of the Nobel Prize know how to think about every economic problem they encounter, and they can go beyond academic exercises to change the world. That is the explicit goal of this book, which argues that economics should be used to support action on the most important problems of our times. Many of the problems we face are economic in nature: how to provide health care for all, how to ensure that the benefits of technological change are spread more evenly, how to make sure that the planet is not destroyed in the process of providing a better life for everyone. The deployment of good economic thinking is a crucial part of the solution to any public objective—whether it be to reduce inequality, stimulate long-term growth, slow climate change, or eliminate COVID 19. In Winston's view, policymakers should be much more aware of the many ways that crises, such as the coronavirus pandemic, have exposed the potential that markets have to provide greater assistance in achieving those goals. Winston synthesizes the empirical evidence on the efficacy of markets in helping to protect consumers against anti-competitive behavior and when technology approaches to address the adverse economic and social problems and could provide specific recommendations to the interface of politics and economic development.

Good Economics for Hard Times Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research at the intersection of economics and public policy to present a clear-eyed collection of practical solutions to poverty, inequality, and other social problems.

Communities in Action National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable; such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The Economics of Discrimination Gary S. Becker 2010-08-15 This second edition of Gary S. Becker's The Economics of Discrimination has been expanded to include three further discussions of the problem and an entirely new introduction which considers the contributions made by others in recent years and some of the more important problems remaining. Mr. Becker's work confronts the economic effects of discrimination in the market place because of race, religion, sex, color, social class, personality, or other non-pecuniary considerations. He demonstrates that discrimination in the market place by any group reduces their own real incomes as well as those of the minority. The original edition of The Economics of Discrimination was warmly received by economists, sociologists, and psychologists alike for focusing the discerning eye of economic analysis upon a vital social problem—discrimination in the market place. "This is an unusual book; not only is it filled with ingenious theorizing but the implications of the theory are boldly confronted with facts. . . . The intimate relation of the theory and observation has resulted in a book of great validity on a subject whose interest and importance are obvious."—M.W. Reder, American Economic Review "The author's solution to the problem of measuring the motive behind actual discrimination is something of a tour de force. . . . Sociologists in the field of race relations will wish to read this book."—Karl Schuessler, American Sociological Review Handbook of Social Economics SET: 1A, 1B Jess Benhabib 2011 How can economists define and measure social preferences and interactions? Through the use of new economic data and tools, our contributors survey an array of social interactions and decisions that typify homo economicus. Identifying economic strains in activities such as learning, group formation, discrimination, and the creation of peer dynamics, they demonstrate how they tease out social preferences from the influences of culture, familial beliefs, religion, and other forces. Advances our understanding about quantifying social interactions and the effects of culture Summarizes research on theoretical and applied economic analyses of social preferences Explores the recent willingness among economists to consider new arguments in the utility function
